EDUCATION

M.S. in Information & Computer Science
University of Massachusetts Amherst | Amherst MA *Expected graduate in Dec. 2020*

- Coursework: Distributed Systems, Advanced Algorithms, Ubiquitous Computing, Artificial Intelligence, Machine Learning, Neural Networks, Computer Vision

B.S. in Computer Science and Information Engineering (minor in Economics)
Nation Taiwan University | Taipei, Taiwan *May 2014*

- Coursework: Computer Architecture, Computer Networks, Design Patterns, Database, Digital Image Processing, Compiler, Automata Theory, Assembly

EXPERIENCE

Research Assistant - Application Development
National Taiwan University (NTU), in collaboration with Medical Genetics Department of NTU Hospital | Taipei, Taiwan *Mar. 2018 – Dec. 2018*

- Upgraded desktop genetic analysis system into web-based service resulting in **system utilization increase by 150% and 35% cost reduction** of device upgrades for doctors and genetic researchers.
- Designed and developed web interfaces of genetic analysis system using JavaScript with VueJS and Element UI library. Integrated open source tools such as Integrative Genomics Viewer (IGV), Snapshots, and CKEditor to the system.
- Increased medical database backup speed **10 times faster** by configuring RAID, link aggregation and upgrading local network cables.

Product Manager
QSAN Technology | Taipei, Taiwan *Sep. 2016 – Jul. 2017*

- **Led team of 5** to develop virtualization application by integrating KVM (Kernel-based Virtual Machine) to designated Network-Attached Storage (NAS) systems from concept to delivery.
- Spearheaded project to improve user performance of NAS applications by overhauling interfaces of the system control panel, account, permission, file searching, and tutorial wizard, **increasing efficiency by 30%.**
- Collaborated with test engineers in defining test plans for applications functionalities, product compatibility of hardware, and third-party software.

Software Engineer
QSAN Technology | Taipei, Taiwan *Jul. 2015 – Aug. 2016*

- Developed a bidirectional unified permission management module by patching Samba package, that enabled account privileges and file permissions set by Windows ACL that can be translated to POSIX ACL and vice versa.
- Contributed toward **20% completion** of NAS system functionalities, including iSCSI volume connector, account management, file sharing, and resource management tools, utilizing JavaScript, ExtJS, PHP, and C.
- Integrated Kodi media packages to the NAS system enabling users to directly play video/audio on TV through web interface.

PROJECTS

Mynifold Jul. 2020 – Present

- Developed a Chrome extension in JavaScript that manages and controls YouTube media across different browser windows.

Pygme.com (Distributed Systems) Apr. 2020 – *May 2020*

- Utilized micro-service architecture to create multi-tier online book selling service with caching, fault-tolerance, and replication to guarantee performance, consistency, and reliability, implemented in Python with Flask.

Posture Recognition App (Ubiquitous Computing) Mar. 2019 – *Apr. 2019*

- Built an Android app that achieves **92% accuracy** on recognizing motions such as walking, running, and standing.

SKILLS

- **Programming Languages:** JavaScript, Java, Python, HTML/CSS, PHP, C, SQL
- **Frameworks/Libraries:** VueJS, ExtJS, Flask, Django, Laravel, Element UI, Samba
- **Tools/Plaform:** Git/SVN, Docker, Amazon AWS, Google Cloud Platform, Android Studio, Kaggle, PyTorch
