EDUCATION

M.S. in Information & Computer Science
University of Massachusetts Amherst, Amherst MA *Expected graduate in Dec. 2020*

- Coursework: Distributed Systems, Advanced Algorithms, Ubiquitous Computing, Artificial Intelligence, Machine Learning, Neural Networks, Computer Vision

B.S. in Computer Science and Information Engineering (minor in Economics)
Nation Taiwan University, Taipei, Taiwan *Sep. 2009 – May 2014*

- Coursework: Computer Architecture, Computer Networks, Design Patterns, Database, Compiler, Automata Theory

EXPERIENCE

Research Assistant – Software Development (JavaScript, VueJS)
National Taiwan University (NTU), Taipei, Taiwan *Mar. 2018 – Dec. 2018*

- Executed AI-aided precise medical decision project in collaboration with Medical Genetics Department of NTU Hospital. Upgraded desktop genetic analysis system into web-based service resulting in **system utilization increase by 150% and 35% cost reduction** of device upgrades for doctors and genetic researchers.
- Designed and developed web interfaces of genetic analysis system using JavaScript with VueJS and Element UI library. Integrated open source tools such as IGV viewer, snapshot, and CKEditor to enhance system functionality.
- Increased medical database backup speed **10 times faster** by configuring RAID, link aggregation and upgrading local network cables.

Product Manager
QSAN Technology, Taipei, Taiwan *Sep. 2016 – Jul. 2017*

- **Led team of five** to develop virtualization application by integrating KVM (Kernel-based Virtual Machine) to designated Network-Attached Storage (NAS) systems from concept to delivery.
- Spearheaded project to improve user performance of NAS applications by overhauling interfaces of the system control panel, account, permission, file searching, and tutorial wizard, **improving efficiency by 30%.**
- Initiated two feature development projects and five product functionality improvement projects that received **75% positive feedbacks** from users.

Software Engineer (JavaScript, ExtJS, C, PHP, Linux)
QSAN Technology, Taipei, Taiwan *Jul. 2015 – Aug. 2016*

- Achieved cross-system permission translation by designing **bidirectional** unified permission management module in C, enabling account privileges and file permissions set by Windows ACL that can be translated to POSIX ACL and vice versa.
- Contributed toward **20% completion** of NAS system functionalities in a team of 12, including iSCSI volume connector, account management, file sharing, and resource management tools, utilizing JavaScript, ExtJS, PHP, and C.
- **Increased potential NAS buyers by 10%** by integrating Kodi media packages to the NAS system enabling users to directly play video/audio on TV through web interface.

PROJECTS

Mynifold (JavaScript) *Jul. 2020 – Present*

- Developed a Google Chrome extension in JavaScript that manages and controls YouTube media players across different tabs and browser windows.

Pygme.com (Distributed Systems) (Python, Flask, SQL, Docker) *Apr. 2020 – May 2020*

- Implemented micro-service architecture to create an online multi-tier book selling service using Python with Flask. Boosted overall data query speed by **31.5%** by implementing caching mechanism.

Posture Recognition App (Ubiquitous Computing) (Java, Android, Python) *Mar. 2019 – Apr. 2019*

- Built an Android app that achieves **92% accuracy** on recognizing motions such as walking, running, and standing.

SKILLS

- **Programming:** JavaScript, Java, Python, HTML/CSS, PHP, C, SQL
- **Frameworks/Libraries:** VueJS, ExtJS, Flask, Django, Laravel, Element UI, Samba, PyTorch, scikit-learn, pandas
- **Tools/Platform:** Git/SVN, Docker, Amazon AWS, Android Studio, Kaggle
